SUMMARY

Senior QA Engineer and SDET with 5+ years designing test automation for AI-powered healthcare, digital payments, banking, and e-commerce platforms. Specialist in Playwright with TypeScript, combining two complementary strengths: validating AI and GenAI features for correctness and consistency, and applying AI-augmented quality engineering with Cursor and Playwright MCP to accelerate test design, authoring, and failure triage. Built automated test suites from the ground up, totaling 1,600+ tests, automated 20+ end-to-end services, and cut regression execution time by 40%. Acts as QA Tech Lead, setting automation standards, owning CI/CD quality gates, and mentoring engineers to deliver automation independently.

CORE SKILLS

Test Automation — Playwright (TypeScript), Cypress (JavaScript), Robot Framework (Python), Selenium, Appium, Vitest, Page Object Model, fixtures, BDD and Gherkin (Cucumber)

AI Product Testing — Validation of AI and GenAI features for correctness, safety, and consistency; detection of hallucinations, inconsistent outputs, and edge cases; schema and business-rule assertions over non-deterministic output; prompt and model regression; golden datasets

AI-Augmented QA — Cursor (test authoring, refactoring, and CI failure triage), Cursor Rules, Playwright MCP, prompt engineering, AI-assisted test generation from requirements, user stories, and acceptance criteria

Testing Types — End-to-end, API, regression, integration, performance and load, mobile, cross-browser, accessibility (WCAG), visual regression, exploratory

CI/CD and Infrastructure — GitHub Actions, Jenkins, Docker, Linux, test sharding and parallelization, Allure, trace and video artifact analysis

Data and Tools — SQL, PostgreSQL, DBeaver, REST APIs, Postman, k6, JMeter, Git, Jira, ClickUp, AWS (basic)

Practices — Scrum, Kanban, shift-left testing, risk-based testing, test strategy, quality governance, technical mentoring

EXPERIENCE

SOAP HEALTH — Senior QA Engineer & QA Tech Lead

Feb 2025 – Present

Remote (US company) · AI-powered clinical decision support for healthcare providers

- Built the automation practice from zero to 400+ Playwright and TypeScript tests covering critical clinical journeys, edge cases, and backend authentication flows.
- Own the quality of AI-assisted clinical features, validating non-deterministic model outputs through schema and business-rule assertions, plus regression checks on prompt and model changes.
- Lead the QA team as technical mentor, running training on Playwright fundamentals, Git workflows, code quality, dependency management, and CI/CD, taking members from zero automation experience to independent test delivery.
- Re-architected the legacy suite into Page Object Model with fixtures and a locator strategy based on roles and test IDs, reducing flaky failures and CI re-runs.
- Introduced AI-augmented workflows with Cursor and Playwright MCP for test scaffolding, refactoring, and CI failure triage, shortening test authoring and debugging cycles.
- Own CI quality gates in GitHub Actions with parallelized runs and Allure reporting, turning failure analysis into a repeatable, artifact-driven process.
- Write unit and integration tests in Vitest alongside developers to shift quality left and catch defects before end-to-end execution.
- Run a traceable QA process in Jira and ClickUp, from requirement to test case to defect.

HST CARD TECHNOLOGY — QA Engineer

Apr 2022 – Feb 2025

Remote (Campinas, SP, Brazil) · Digital wallets and card tokenization for the banking sector

- Automated 20+ end-to-end services covering 1,200+ test scenarios in Python with Robot Framework.
- Cut web regression execution time by 40% by re-engineering the Cypress suite through locator strategy, selective execution, and parallelization.
- Validated ETL and payment data integrity with complex SQL queries in DBeaver across transaction and settlement workflows.
- Delivered quality and security testing for digital wallet products sold to 5+ banks across API, web, and mobile platforms.
- Partnered with squads on test strategy for tokenization and wallet flows, embedding QA from refinement onward.

DOCK — QA Engineer

Aug 2021 – Apr 2022

Remote (Barueri, SP, Brazil) · Core banking: card authorization, ledger, and reconciliation

- Defined the test strategy for a banking reconciliation system and a document management product.
- Tested web, mobile, and API layers of a multi-asset ledger serving 300+ clients.
- Identified critical pre-release defects in card authorization and reconciliation flows, protecting financial data integrity.

UNIPÊ SOFTWARE FACTORY — QA Lead

Feb 2021 – Jul 2021

João Pessoa, PB, Brazil · Web system for cost control in healthcare programs

- Led the QA team through test planning and the execution of manual and automated tests.
- Built the automation layer with Java, Selenium, and Maven.
- Reviewed requirements documentation to close test coverage gaps before delivery.

EDUCATION

Technologist Degree in Systems Analysis and Development

2021 – 2023

*Centro Universitário de João Pessoa (UNIPÊ)***LANGUAGES**

Portuguese (Native) · English (C1 Advanced, daily working proficiency with US teams)
